Why Choose a RapidReset Gate Lock?

1 Effortless Code Changes

Traditional mechanical code locks often require removal from the gate to change the entry code. The Superlock's RapidReset feature revolutionises this process, allowing you to update the code directly on the lock in just 10 seconds. This quick and straightforward method ensures your security can adapt swiftly to changing needs without the hassle of disassembly.

3 No Power Required

Operating entirely mechanically, the Superlock with RapidReset eliminates the need for batteries or external power sources. This design not only reduces maintenance but also ensures reliable performance in any environment, providing peace of mind that your security isn't dependent on power availability.

5 User-Friendly Design

The Superlock features an easy-to-operate handle and an auto-latching mechanism—simply close the gate, and it securely latches into place. Access is granted by entering the correct code and turning the handle, providing a seamless and intuitive user experience.

2 Daytime Mode

The Superlock with RapidReset features a Daytime Mode, allowing the code to be cleared during the day so the lock functions as a simple handle and latch. This makes it ideal for locations with frequent access, such as sports courts, schools, workplaces, or community spaces. When it comes to closing and securing the site, a new code can be set in seconds, restoring security overnight without any hassle.

4 Robust and Durable Construction

Built with a slim 70mm stainless steel case, this lock is designed to withstand the elements and resist corrosion, making it ideal for outdoor use. The adjustable and removable latchbolt enhances its adaptability to various gate styles, ensuring a secure fit and long-lasting durability.

6 Enhanced Security Features

With a latchbolt that projects up to 20mm into the post, the Superlock offers increased security and greater tolerance against forced entry. The mechanical keypad ensures that only those authorised can gain access, and with no external power requirements, there are no electronic vulnerabilities to exploit.

The Superlock with RapidReset is the perfect solution for locations with a regular turnover of people, where security needs to be updated frequently without hassle. Quick and easy code changes can be made in just 10 seconds with no need for removal or complex procedures. It's ideal for shared access points where different users require a secure but temporary entry.

Holiday Homes

Easily update the gate code between guests without needing to replace keys or locks.

Short-Term Lettings

Simplify key management by updating codes for each new tenant.

Worksite Access

Adjust codes quickly for contractors and employees, ensuring security as access needs change.

Sports Clubs & Community Centres

Conveniently and timely updates provide secure but flexible access to members while preventing unauthorised entry.

Schools & Educational Facilities

Modify access codes at the start of new terms or after staff changes.

Shared Residential Gates

Allow residents to update entry codes periodically for added security without complex procedures.

RapidReset was developed after listening to customer needs for many different scenarios, we've created a solution that delivers speed, flexibility, and reliability—all without the need for power or complex installation.

Rapid Reset at the Wishing Tree House

At Gatemaster, our goal is to make security simple, reliable, and user-friendly. When we developed the RapidReset Superlock, we set out to solve a common problem—changing gate codes quickly and easily. Our new lock eliminates the hassle of removing the lock from the gate just to update a code, saving time and effort. One of the first properties to install the RapidReset lock was The Wishing Tree House. Here's how it transformed their access control:

The Project

Through speaking with the customer about their specific challenges, we identified the users' key issues with their current gate lock:

- **Complicated Code Changes:** Existing locks required tools and removal from the gate just to update the entry code.
- **Security Risks:** Shared or outdated codes made it easier to gain unauthorised access.
- **Convenience Issues:** Users wanted a way to temporarily disable the lock for free access when the gate was in frequent use.

The team at The Wishing Tree House had already been using our Double-Sided Superlock (BDG) and loved its quality and ease of installation. However, they needed something even more flexible and convenient for times when regular access was necessary.

The Outcome

The Wishing Tree House was one of the first locations to install the Superlock with RapidReset, and the process was effortless. Since they were upgrading from an existing Superlock, it was simply a case of unbolting the old lock and fitting the new one—no modifications required.

- **Saved time:** The new lock eliminated the hassle of removing the lock for a reset, saving time and effort.
- **Convenient Access with Daytime Mode:** The ability to disable the code during high-use periods meant users could pass freely while keeping the option to reinstate security when needed.
- **Improved Security:** With easy, frequent code updates, the risk of unauthorised access due to shared or outdated codes was significantly reduced.

The Gatemaster Solution

The RapidReset was designed to tackle these exact challenges. Key features include:

- **Quick Code Changes:** Update the code in seconds without tools or removing the lock from the gate.
- **'Daytime Mode':** Clear the code to turn the lock into a simple handle and latch for unrestricted access. A new code can be set in seconds when security is needed again.
- **User-Friendly Operation:** The lever handle design makes it easy to grip and turn, ideal for frequent use.

From concept to finalisation, our gate hardware aims to make things as simple as possible for the installer and the end user, while producing a strong and durable product that will endure extreme weather and heavy wear and tear.
